

WABACK® ACCESS

WABACK® ACCESS LARGE

WaBack Access has all the benefits of the WaBack non-return chamber. WaBack Access comes in a chamber in which the WaBack non-return chamber is detachable from ground level. This facilitates operation and maintenance, and makes it easy to replace parts. The product is usually used as protection against overload and flooding in drains, and as protection against backflow of surface water and waste water. The product is used to advantage in heavily polluted water. The flow area is completely open, to ensure blockages are prevented.
